

Variance in Care...

...to Performance Improvement

WELCOME TO QMETIS. Qmetis is a healthcare IT firm that builds clinical decision-support tools designed to help hospitals achieve the highest levels of quality possible for each case, for every shift, for many conditions. Our quality assessment and quality assurance tools are fast, simple, interactive, grounded in the science of evidence-based medicine, and designed to place the very latest approved treatment guidelines at the fingertips of staff, at the patient bedside.

Decision Support

Performance Improvement

The Highest Quality

Every Patient... Every Shift

WHY QMETIS

1

A unique quality assessment and quality assurance software tool that can play a key role in performance improvement

2

A fast and clear way to immediately compare the care being given your patient to the latest treatment recommendations

3

Real-time identification of the specific areas of care that might need further attention due to protocol variance

4

Continuous education of staff on treatment protocols with immediate feedback provided for review

5

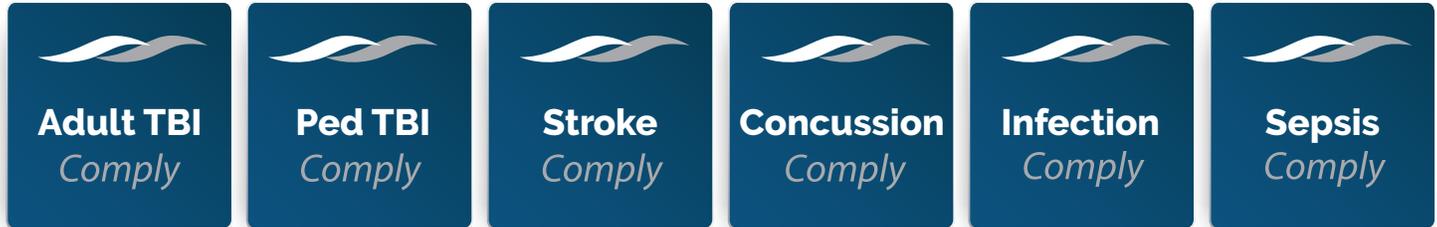

Continuous updates to the Qmetis software as new treatment guidelines are published, so remaining always current with the latest standards of care

6

A reduction in variance in care, average length of stay, and unbillable ICU days

LIFELONG LEARNING...IN 90 SECONDS

Qmetis's first products are for adult and pediatric traumatic brain injury. Our products take 100's of pages of literature and condense those into a fast, interactive, real-time education tool, providing immediate feedback to doctors and nurses on whether the care being given is consistent with the latest evidence-based treatment guidelines. And our work goes beyond traumatic brain injury.

KEY FEATURES

Quality Assessment: Qmetis is before all else an education tool, providing instant access to the latest evidence-based literature

Quality Assurance: Instant bedside feedback and reports apprise caregivers of their current treatment vis-à-vis evidence-based recommendations

Ongoing Record of Quality Improvement: The patient's condition and care provided can be continually followed each shift, showing change in care as feedback is received

Real-Time Web-Based Interactive Software: Interactivity with the clinical team at the point of care, offering not a retrospective look months later, but real-time reporting on quality

Provision of Liability Protection: Independent documentation of compliant care

Highly Secure, HIPAA-Compliant Computer Environment

Interoperability/Integration: The Qmetis software can be integrated into hospital EMR systems

Immediate Software Updates as New Guidelines Are Published: A novel approach to staff training and higher quality across every case, immediately providing new treatment recommendations to staff

Product Dashboard: A dynamic part of the Qmetis software, allowing you to view each case, each day, each shift, and each area of care that may need additional staff training
